

Relevant Coursework

Ananya Devarakonda, final year student, BTech. Electronics and Communication Engineering, Manipal Institute of Technology, Manipal

This document has a list of all my relevant electives taken directly from the department issued syllabus. **You can find the link to the official syllabus:**

<https://manipal.edu/content/dam/manipal/mu/mit/documents/ece-course-outline/B.Tech%20ECE%20Course%20outline.pdf>

ECE 4080 OBJECT ORIENTED PROGRAMMING USING C++ [3 0 0 3]

User-defined functions and overloading, recursive functions. Class specification, class objects, constructors, destructors, friend functions. Base class, inheritance and protected members, types of inheritance, virtual base classes. Virtual function, inheritance of virtual functions, hierarchical virtual functions, pure virtual functions. C++ stream classes hierarchy, stream I/O, file s and string streams, file operations, error handling, formatted I/O. Benefits of exception handling, throwing an exception, try block, catching an exception, throwing an exception, catching all exceptions.

ELE 4061 ARTIFICIAL INTELLIGENCE [3 0 0 3]

Foundation and History of AI, State of the art, Fields of application , Performance measures, Rationality, Specification and properties of task environment, Structure of Agents, Problem solving by searching, Searching for solutions, uninformed search strategies, Informed search strategies, Heuristic functions, Local search algorithms, Online search, agents, Knowledge based agents, The Wumpus World, Propositional logic – reasoning patterns, effective inference, First order logic – Syntax and semantics, Knowledge engineering, Inference rule, forward and backward chaining, Ontological engineering, categories and objects, Processes

and intervals, reasoning systems, Truth maintenance systems, Uncertainty, Basic probability notation, Axioms, Baye's rule, Bayesian networks, Inference in Bayesian networks.

ECE 4051 COMPUTER VISION [3 0 0 3]

Image formation model using pinhole camera, Linear filters and convolution, Image derivatives, Features: corners, SIFT, HOG, textures. Segmentation using clustering (K-means, Mean-Shift, Watershed) and fitting model, Segmentation and fitting using probabilistic methods (EM algorithm), Geometry of two view and Camera calibration including radial distortion, Bayes Classifier: using class histograms, using class conditional density, Support Vector machine

ECE 4052 MACHINE LEARNING [3 0 0 3]

Machine learning basics, Naïve Bayesian Model. Non-Parametric Techniques: Density Estimation, Parzen Windows, k- Nearest-Neighbor Estimation, K- nearest neighbor classification, Radial Basis Function Network, Learning Vector Quantization, Clustering, K-Means clustering, Competitive learning, Self-Organizing Maps, Recurrent Neural Network, Hopfield Neural Network, Adaptive Resonance Theory, Support vector machines, Statistical Hypothesis testing- t-test, ANOVA, feature selection methods – Filter based techniques and wrapper methods, Principal Component Analysis, Applications of PCA, PCA ,Independent component analysis, Voting, Error correcting output codes, Bagging, Boosting

ECE 4078: MOTION AND GEOMETRY BASED METHODS IN COMPUTER VISION

Geometric primitives, 2D/3D transformations, image features, Image registration (2D/3D) of rigid and deformable objects, Tracking by detection, Tracking using optical flow and KLT, Tracking linear dynamical models with Kalman filters, Epipolar geometry, Binocular reconstruction, Local and global methods for binocular fusion, Structure from motion: Internally calibrated perspective cameras, Uncalibrated weak perspective cameras, Uncalibrated perspective cameras, Active range sensors, Range image registration

MCA 4304 INTRODUCTION TO DATA ANALYTICS [3 0 0 3]

Introduction - data science, need for analytics, steps in data analysis projects, Data- sources of data, data sets, data warehouses, data types, privacy and confidentiality, samples vs. population. Data summarization and visualization – tables and graphs. Data Preprocessing- cleaning, transformation, dimensionality reduction. Data Analysis and Visualization – descriptive, inferential statistics, uni-variate and multivariate analysis. Grouping – Cluster Analysis- distance measures, partitioning, hierarchical, density based methods. Market Basket Analysis, Association Analysis, Market Basket Analysis. Classifiers Bayesian, k-nearest neighbor, neural network, Support Vector Machine,

Decision Trees. Prediction- Regression models, Evaluating Classification and Predictive performance, ensemble methods. Anomaly Detection. Forecasting models.
